Summary of Qualifications

Full Stack JavaScript Engineer with 3+ years of experience developing production-grade systems using JavaScript/TypeScript, React, and Node.js. Contributed to 10+ large-scale projects, including CRM, ERP, and AI-powered applications. In 2025, completed 150+ tasks across multiple projects, achieving 99% adherence to deadlines and requirements. Experienced in building scalable full-stack systems, implementing real-time features, architecting robust client-server communication, managing complex frontend state, and optimising application performance. Comfortable owning features end-to-end from planning to production and collaborating in international, cross-functional teams.

Technical Skills

Programming Languages:
JavaScript, TypeScript.

Frontend:
Next.js, React, Redux, Redux Toolkit, Zustand, RTK Query, React Query, HTML5, CSS3, SCSS, BEM, Responsive Design, Material UI, Tailwind CSS.

Backend:
Node.js, Express.js, NestJS, REST API, JWT, OAuth 2.0, Webhooks, WebSocket, Real-Time Communication, GraphQL.

Databases & Data Access:
PostgreSQL, MongoDB, SQL, NoSQL, Mongoose, MongoDB Node.js Driver, TypeORM, Sequelize, Prisma.

Tools & Platforms:
Git, GitHub, Jira, Trello, Docker, Google Cloud Platform, Retool, Low-Code.

Development Tools and AI:
VS Code, ChatGPT, Codex, GitHub Copilot, PowerShell, Postman, Swagger, Prettier, ESLint.

Testing:
Jest, Mocha, Playwright.

Methodologies:
Agile (Scrum), Waterfall.

Professional Experience

AI-Powered Construction Project Management System

Company: SmartConstruct

Full Stack Software Engineer

March 2025 — August 2026

Contributed to the development of an AI-powered project management platform for the construction industry, now used by over 50 companies across Europe. The project is focused on real-time monitoring of tasks, improving workflows, and optimising performance.

- Integrated an AI assistant (OpenAI API) for automated report generation, saving project managers approximately 5 hours per week.
- Connected external services via APIs and webhooks, enabling automated data exchange across internal and third-party systems.

- Enhanced platform performance and usability through frontend optimisation, state flow improvements, and streamlined user interactions.
- Developed scalable backend modules with Node.js, NestJS, and MongoDB for task management, reporting, integrations, and workflow automation.
- Implemented a low-code tool (Retool) for building internal interfaces, enabling business users to handle 70% of routine tasks without developer involvement.

Tools & Technologies: React, Next.js, Zustand, Node.js, NestJS, MongoDB, Retool, OpenAI API, WebSocket.

Internal Resource Management ERP

Company: SmartConstruct

Full Stack Software Engineer

January 2024 – March 2025

Developed a robust ERP system focused on optimising resource utilisation and workforce coordination. The platform provided tools for managing operational workflows, monitoring resource availability, and supporting efficient execution of business processes across multiple projects.

- Developed scalable frontend features using React, Next.js, and Redux Toolkit, implemented responsive layouts following BEM methodology and Material UI, improving user productivity and reducing manual coordination time.
- Implemented backend services with Node.js and NestJS, building REST APIs for resource and workforce management, which improved data processing efficiency and system responsiveness.
- Structured and optimised PostgreSQL database schemas and added indexes, ensuring reliable data consistency and supporting high-load operations across multiple projects.
- Containerised application services using Docker, simplifying deployment processes and improving development and environment consistency.

Tools & Technologies: TypeScript, Next.js, React, Redux Toolkit, Node.js, NestJS, PostgreSQL, Docker.

Business Operations Management System

Company: SmartConstruct

Full Stack Software Engineer (Intern)

May 2023 – December 2023

Participated in the development of an internal business management system designed to streamline order processing, inventory tracking, and daily operational workflows within the company.

- Built interactive frontend features using React and Redux, including dynamic forms and data tables, improving user experience and reducing task completion time by ~20%.
- Developed REST APIs with Node.js and Express.js, implementing JWT authentication and MongoDB schemas, ensuring secure and efficient data handling for 100+ daily operations.
- Integrated frontend and backend components, resulting in stable system performance and reducing data inconsistencies by 50%.
- Worked in a Scrum team of 4–6 developers, using Jira for sprint planning, daily stand-ups, and task tracking.

Tools & Technologies: TypeScript, Next.js, React, Redux, Node.js, Express.js, MongoDB.

Education

WSB Merito University Warsaw, Poland
Bachelor's degree in Computer Science

Languages

English – B2+, Ukrainian – native, Russian – native, Polish – B2
